

English summary of Vice-Chancellor decision (Dnr L 2015/74)

The Vice-Chancellor has made the decision that all researchers affiliated to Halmstad University are responsible in making their scientific publications registered in the University's publication database DiVA (Digitala Vetenskapliga Arkivet / Digital Scientific Archive). The registration shall include all scientific publications connected to the researcher's employment at the University.

Halmstad University must be stated as the author address in all publishing connected to the researcher's employment at the University. All types of conference publications must be confirmed by showing that the author's participation and affiliation are mentioned in for example: the conference programme or proceeding.

Furthermore, the published material should, if legally possible, be published in full text in DiVA.

The library will review the bibliographic data on research publications registered in DiVA. In cases where required data cannot be verified through information on the web or in other available channels, the author must help the library by personally providing the publication or official conference material. The library will, in these cases, contact the author, who then has two weeks to provide complementary data. If this is not the case, registered contributions may be deleted.
